Nutra-Brood

Marine fish broodstock nutrition supplement

It is clear that broodstock nutrition play an important role in marine fish eggs and larvae quality. Therefore, many hatcheries are using fresh and/or frozen, high quality broodstock food (squid, sardines, prawns etc.). However, in many cases, this type of food may vary in quality due to seasons, post-catch treatment etc. These quality fluctuations may affect the quality of the eggs and the larvae. *Nutra-Brood* design to reduce and eliminate these quality fluctuations.

Nutra-Brood is a new feed additive design to enhance the nutrition of fish and other marine organisms (i.e. crayfish, crabs etc.) broodstock. *Nutra-Brood* comes as liquid oil emulsion that contains essential fatty acids, vitamins, minerals and other essential nutrients.

Nutra-Brood is design to enhance the eggs and larvae quality and reduce the quality fluctuation between egg batches. The emulsion can be injected into the fresh food and is digested and absorbed in the fish gut.

Nutra-Brood can be 'tailor – made' to any fish species and can include any essential nutrients such as vitamins, immunestimulants, HUFA's (at desired levels and ratios), carotenoids etc.info.

Nutra-Brood should be kept at 4°C in dark container.
